

## TCE Comments For MATH 111L.04L, 2020 Fall / McKean, Stephen Henry

<b>_19Comment_future</b>	<b>_20Comment_other</b>
I heard this class was super hard, but I felt like there was plenty of support in place for us to do well. Also everyone was so friendly.	
This course is very fair and plausible as a student who may not thrive in Stem classes. I am a social sci major and did just fine in this course!!	Overall very fair and a good course. I thought the professors really wanted you to succeed which made the class very uplifting and encouraging.
He doesn't explain the big concepts. He will set it up for you but never drive it home. Frustrating since he lets you figure out the hardest stuff on your own (which you probably won't since it would be very time consuming)	
It was a bit difficult online but Stephen is a great guy and I wish I could have met him in person.	It was difficult online with no good way to work on problems together.
The help given in the labs wasn't as helpful as they should've been. It was sometimes confusing rather than helping me understand the topics.	No.
This is a good class, it provides a strong foundation for future classes.	Stephen did a great job of making the class as normal as possible. It's very difficult to teach virtually.
I would say this class/the lab section was helpful, but if you already feel really comfortable with the material, it can move a little slow at times. It is better if there are other students participating, but if they aren't, it is harder to get anything out of it.	I enjoyed the Q&A portion of the lab. However, sometimes the reviews of the concepts moved a little slowly. I wish we were able to work together more on the labs with other students, but I understand there isn't much of a solution to that while class is online.
